

## 1. Text Alignment

Align text to the left, center, right, or justify it with classes:

html

 Copy code

```
<p class="text-start">Left aligned text.</p>
<p class="text-center">Center aligned text.</p>
<p class="text-end">Right aligned text.</p>
<p class="text-justify">Justified text.</p>
```

### Responsive Alignment

Text alignment can be made responsive by adding breakpoints:

html

 Copy code

```
<p class="text-md-center text-lg-end">Responsive aligned text.</p>
```

## 2. Text Color

Bootstrap allows text color customization using predefined classes:

html

 Copy code

```
<p class="text-primary">Primary colored text.</p>
<p class="text-success">Success colored text.</p>
<p class="text-danger">Danger colored text.</p>
<p class="text-warning">Warning colored text.</p>
<p class="text-info">Info colored text.</p>
<p class="text-dark">Dark colored text.</p>
<p class="text-muted">Muted text.</p>
<p class="text-white bg-dark">White text on dark background.</p>
```

## 3. Text Transformation

Change the case of text easily:

html

 Copy code

```
<p class="text-lowercase">this text is lowercase.</p>
<p class="text-uppercase">this text is uppercase.</p>
<p class="text-capitalize">capitalize each word.</p>
```

## 4. Font Weight and Italic

Control font weight and style:

html

 Copy code

```
<p class="fw-bold">Bold text.</p>
<p class="fw-bolder">Bolder text.</p>
<p class="fw-normal">Normal text.</p>
<p class="fw-light">Light text.</p>
<p class="fst-italic">Italic text.</p>
<p class="fst-normal">Normal (non-italic) text.</p>
```

## 5. Text Decoration

Modify text decoration:

html

 Copy code

```
<p class="text-decoration-underline">Underlined text.</p>
<p class="text-decoration-line-through">Strikethrough text.</p>
<p class="text-decoration-none">No text decoration.</p>
```

## 6. Text Truncation

Truncate long text with ellipsis:

html

 Copy code

```
<div class="text-truncate" style="width: 200px;">
  This is an example of truncated text. It is cut off if it's too long.
</div>
```

## 7. Line Height

Adjust line height with `.lh-*` classes:

html

 Copy code

```
<p class="lh-1">Line height 1.</p>
<p class="lh-sm">Small line height.</p>
<p class="lh-base">Default line height.</p>
<p class="lh-lg">Large line height.</p>
```

## 8. Monospace Font

Use the `.font-monospace` class to apply a monospace font:

html

 Copy code

```
<p class="font-monospace">This text uses a monospace font.</p>
```

## 9. Responsive Font Sizes

Control font size based on screen size using `.fs-*` classes:

html

 Copy code

```
<p class="fs-1">Font size 1 (largest).</p>
<p class="fs-3">Font size 3 (medium).</p>
<p class="fs-5">Font size 5 (smaller).</p>
```

## 10. Text Wrapping and Breaking

Control how text wraps or breaks:

html

 Copy code

```
<p class="text-wrap">This text will wrap normally.</p>
<p class="text-nowrap">This text will not wrap.</p>
<p class="text-break">This-is-a-long-line-of-text-with-no-spaces-to-break.</p>
```
